Soak Off Procedure for Bella Forma Nail System

The removal of Bella Forma Gel from the nails is a very simple and easy procedure using Bella Forma's Soak Away.

Remove any Top Coat or Polish from the Bella Forma Gel with Soak Away, take a gold 100 grit nail file and remove all the shine off the nails. This is to remove the surface shine and speed the removal time by allowing the Soak Away to penetrate into the Bella Forma Gel.

Soak a piece of Wonderwipe (a very absorbent lint free material) with Soak Away and drape it over the nail.

Wrap a piece of foil around the Wonderwipe and fingertip. Do not squeeze the foil where you have draped the saturated piece of wonderwipe, as this will squeeze out all of the Soak Away and the soak off procedure will take double the amount of time. Leave in place for approximately 10 minutes. The actual time will depend upon the age of the Bella Forma and the application thickness.

Unwrap the foil and check if the Bella Forma has wrinkled and loosened from the natural nail. If yes, then gently ease off the Bella Forma with an orangewood stick or flat metal implement. If not, then add Soak Away to the Wonderwipe and re-wrap the nail for a further period of time, until the Bella Forma is ready to be gently eased from the natural nail. NEVER force or peel the Bella Forma off the nail as this could result in damage to the natural nail.

Soak Away contains a blend of moisturizing oils to prevent damage to the cuticles, therefore always wash the hands and cleanse the nail plate with Nail Wipe Solution after the removal of Bella Forma gel.

Now you are ready to start with the basic dry manicure and re-apply Bella Forma clear or color gel.
